

HISAKI Level2 data

IDL sample code to read & plot

F. Tsuchiya (Tohoku-U)

SAKURA meeting @ IWF Austria

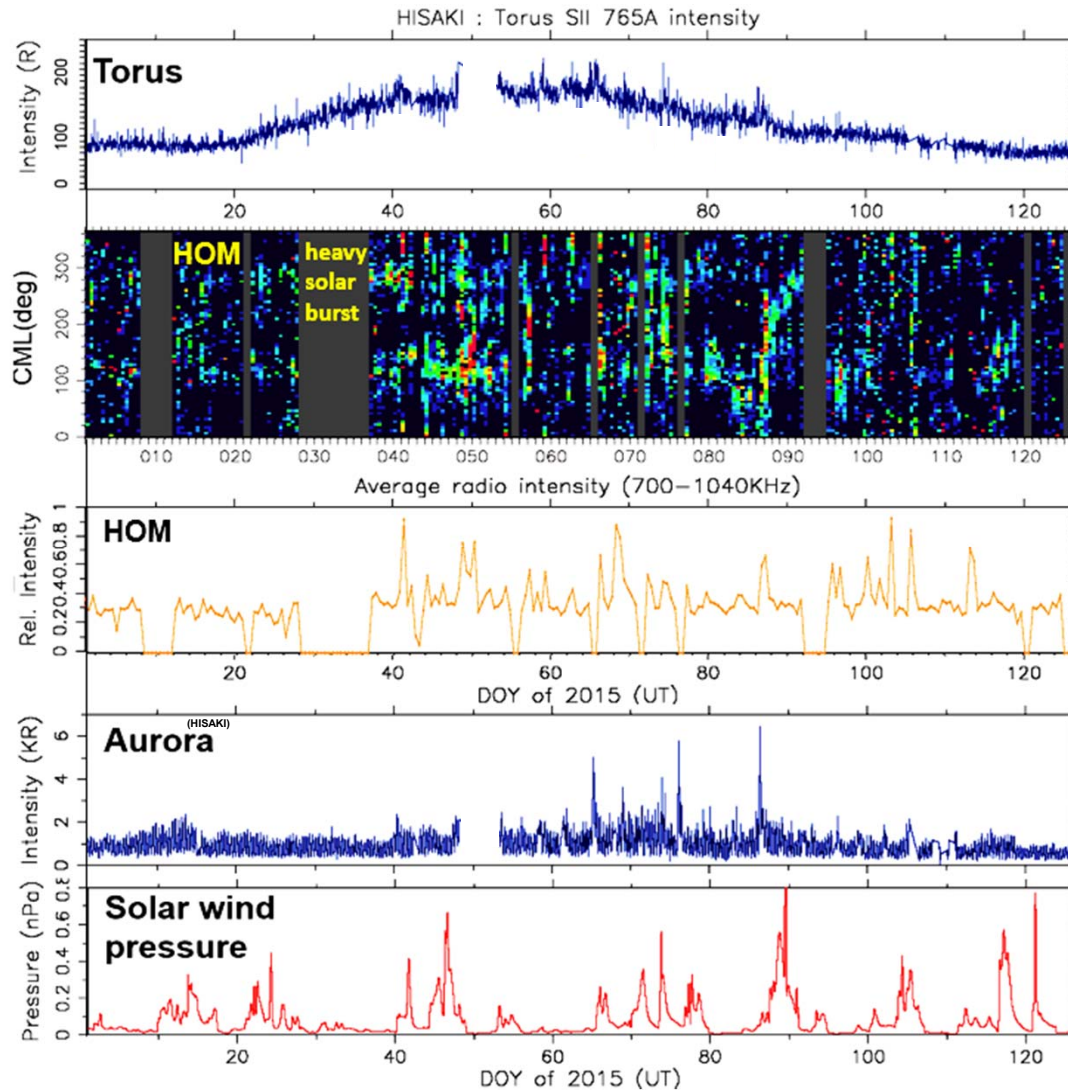

Oct. 28, 2016

One of goals for the SAKURA project

- Comparison of radio data with HISAKI
 - Io-DAM vs. Io plasma torus density change
(due to & Io's volcanic activity)
 - Non-Io-DAM vs. Aurora & Io's volcanic activity
 - HOM vs. Aurora & Io's volcanic activity
- Radio Data
 - NDA, LWA, IITATE, ...
 - WIND, STEREO, ...

HISAKI & HOM (WIND/WAVES) (Misawa et al. 2016)

Example (2)

HISAKI
S+ brightness (765A)

WIND
HOM S3 dependence

WIND
HOM intensity

HISAKI
Aurora intensity

Solar wind dynamic pressure
Model (Tao et al. 2005)

HOM activity increased from DOY40, consistent with aurora activity.

HISAKI & Tohoku-U Radio obs. (DAM) (Kumamoto et al. 2016)

Example (1)

Alfven velocity

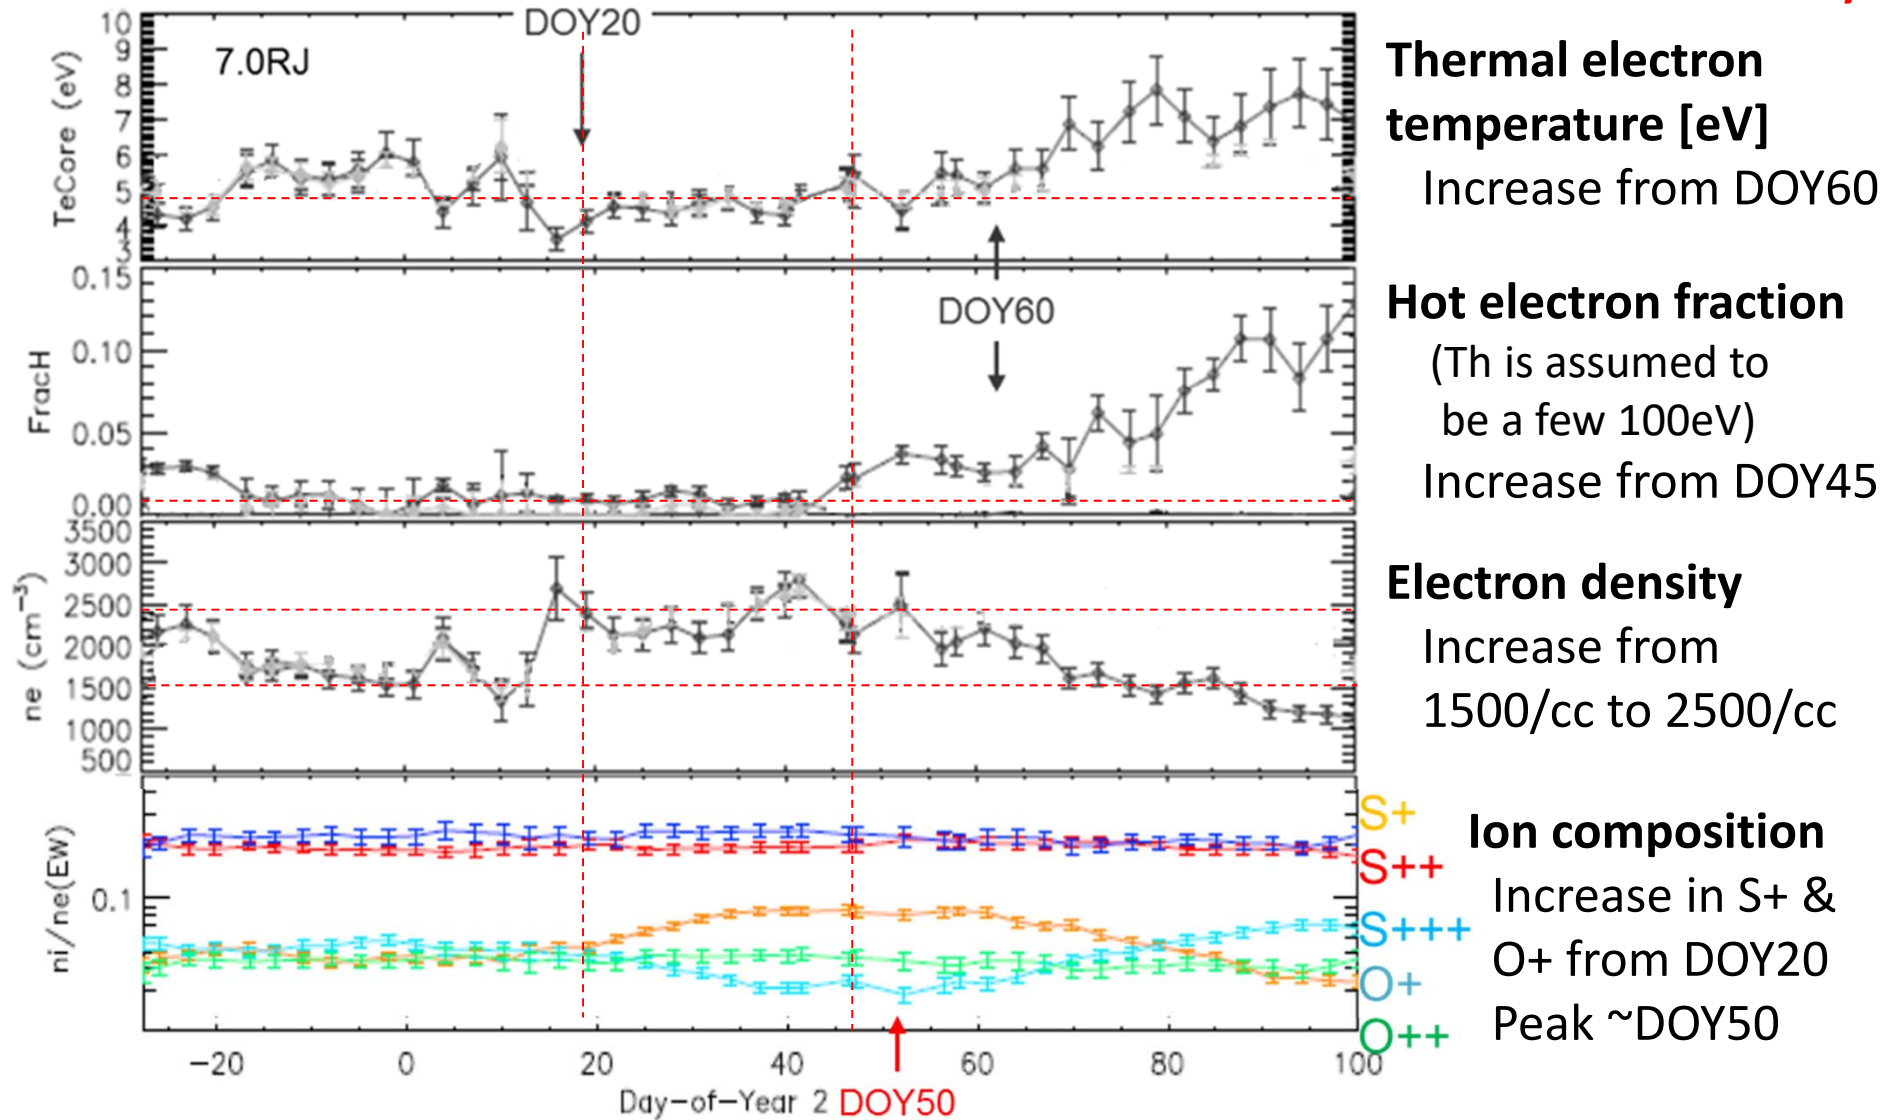

$$V_A = \frac{B}{\sqrt{\mu_0 mn}} \propto \frac{1}{\sqrt{n}}$$

- Timing of main arc (decrease)
- Repetition freq. of arcs (decrease)

Due to increase of Lead angle?

Plasma parameter –Dec. 2014-May 2015- Preliminary

Plasma parameter of Io plasma torus (7RJ) in the spring of 2015 (Kagitani et al. 2016)

Sodium nebula: Neutral accelerated from IPT

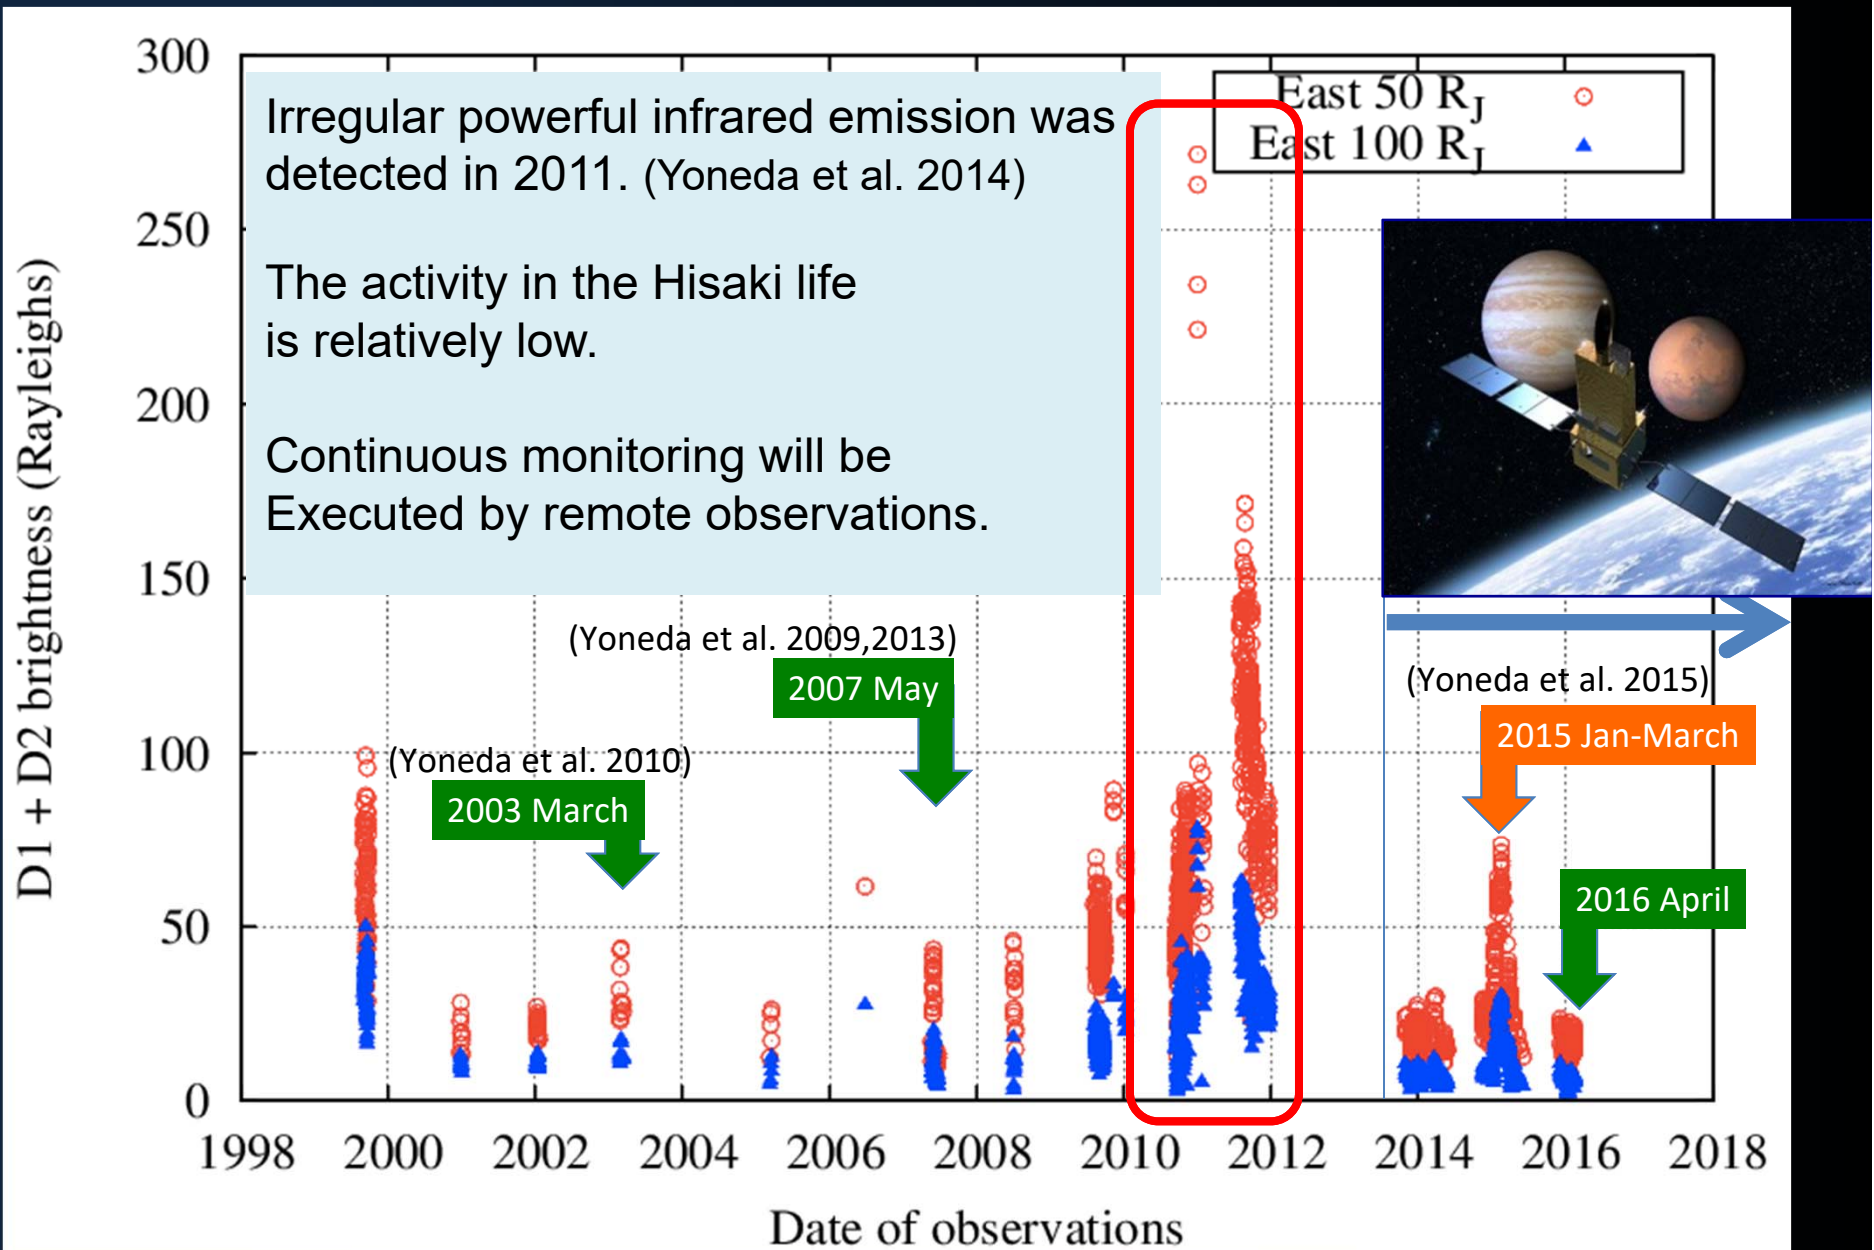

Volcanism (IR) v.s. Sodium brightness (Vis)

[Mendillo et al. 2004]

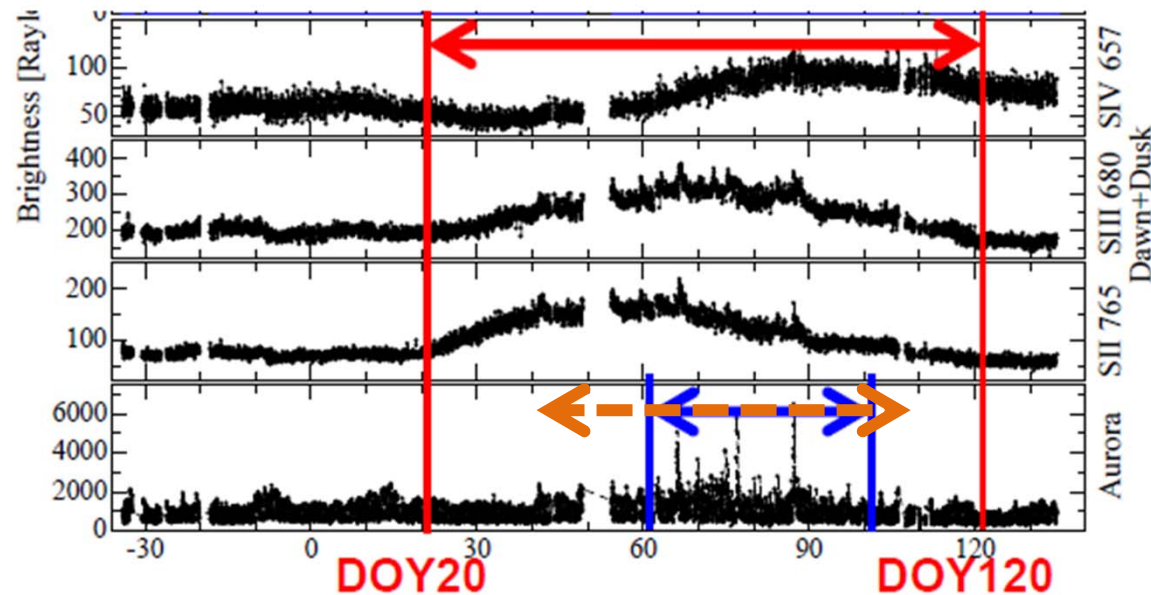

Long Term Io Activity: from 1999

HISAKI Data analysis sample

- Doc and IDL sample code are temporally uploaded below:
 - <http://pparc.gp.tohoku.ac.jp/~tsuchiya/HISAKI/>
Document: HISAKI_L2_Basic_v1_2.pptx
Sample code: idl_sample_v1_2.zip
Spice kernels: spice_kernels.zip
 - HISAKI L2 data
<https://www.darts.isas.jaxa.jp/stp/hisaki/>

Possible use case: Jovian DAM during Volcanic activity detected by Hisaki

Io plasma torus (SII&SIII):

Increase from DOY20 to DOY120
due to volcanic activity

Aurora:

Increase from DOY60 to DOY100 **DOY40 - DOY110**

Jovian DAM:

??? → Analysis of Irate HF data

What you can do with the sample code

- Doc and sample codes include
 - How to set up IDL and SPICE
 - How to read and plot spectrum of Io plasma torus
 - Calibration (photon count rate to intensity in Rayleigh)
 - How get light curve of a specific emission line/band (e.g. S⁺, S²⁺, H₂ aurora, ...)
 - How to find Io phase angle and Jovian longitude (CML) with SPICE
 - How to identify observation mode (on-Jupiter or off-Jupiter)
 - How to remove contamination from radiation belt

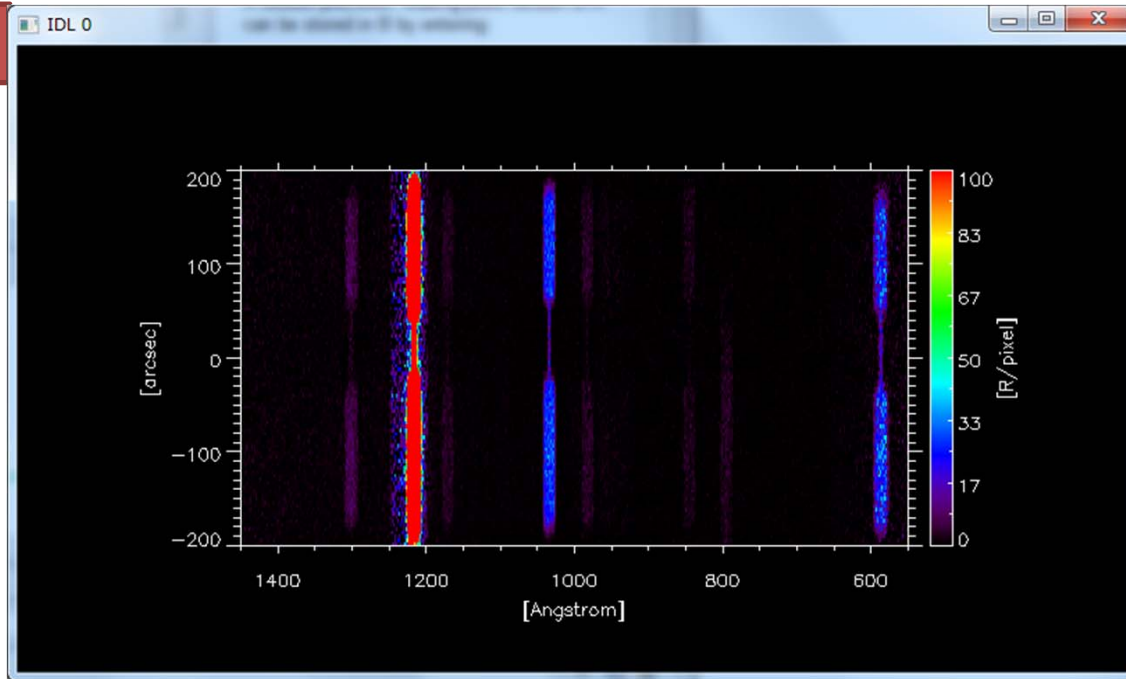

Result3

Jupiter
(+Sky)

Result4

Off-Jupiter
(Sky)

Sky =
foreground geo-
coronal emission (H, O,
O+) and interstellar
emission (H, He)

Continue

- Spectrum of Io plasma torus (at y=140[arcsec])

```
IDL> ret = min(abs(cal_y[512,*]-140.0), i_trg)
```

```
IDL> plot,cal_x[*],i_trg],zarr[*],i_trg]
```

```
IDL> plot,cal_x[*],i_trg],zarr[*],i_trg], yrange=[-5,100], xtitle='Wavelength[A]',  
ytitle='[Rayleigh/Angstrom]', xstyle=1, ystyle=1, /nodata
```

```
IDL> oplot,cal_x[*],i_trg],zarr[*],i_trg], color=cgcolor('red')
```

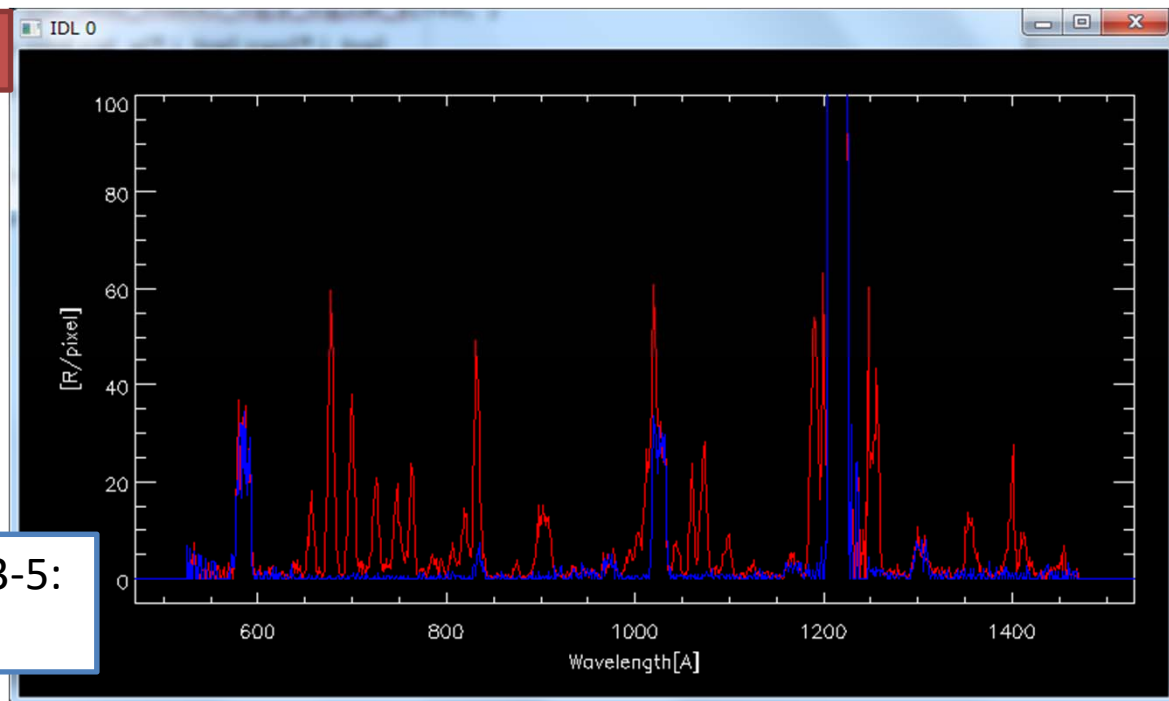

```
IDL> oplot,cal_x[*],i_trg],zarr_sky[*],i_trg], color=cgcolor('blue')
```

Result5

Result5

Red: Io plasma torus
Blue: SKY

Sample code to show Result 3-5:
x_exc_sample1.pro

Result8

Blue : IPT short wavelength

Red: IPT long wavelength

Jupiter northern UV aurora

Geocorona

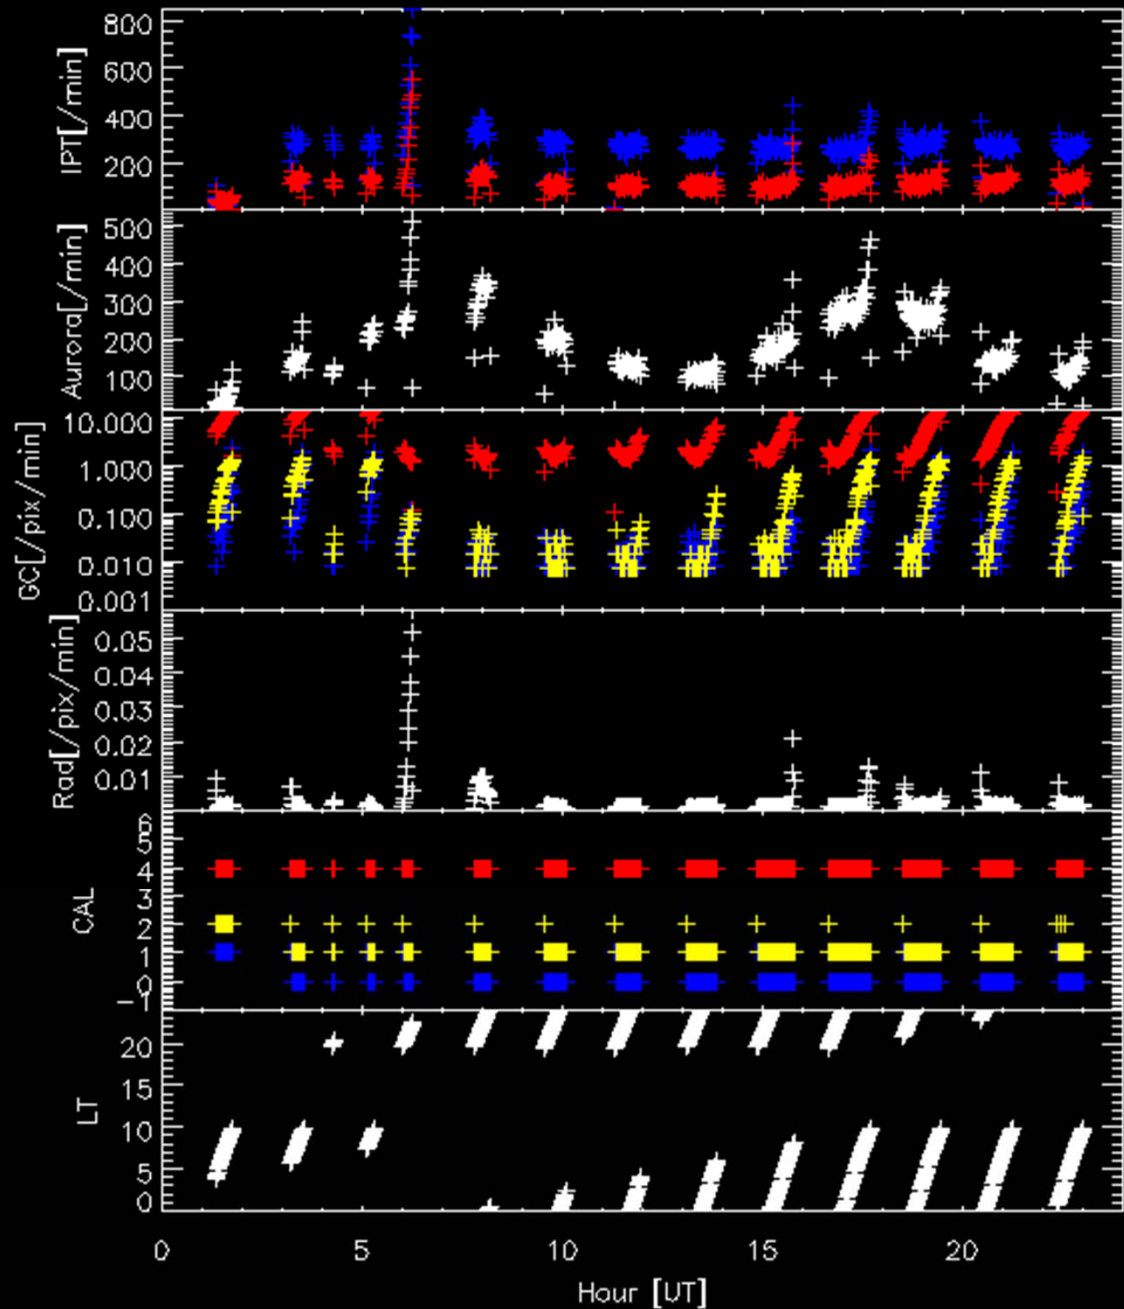

- Red: HI1216
- Yellow: HeI584
- Blue: OI1304

Radiation belt contamination

Attitude flags

- Red: Sub mode
- Yellow: Sub mode status
- Blue: Cal flag

HISAKI Local time

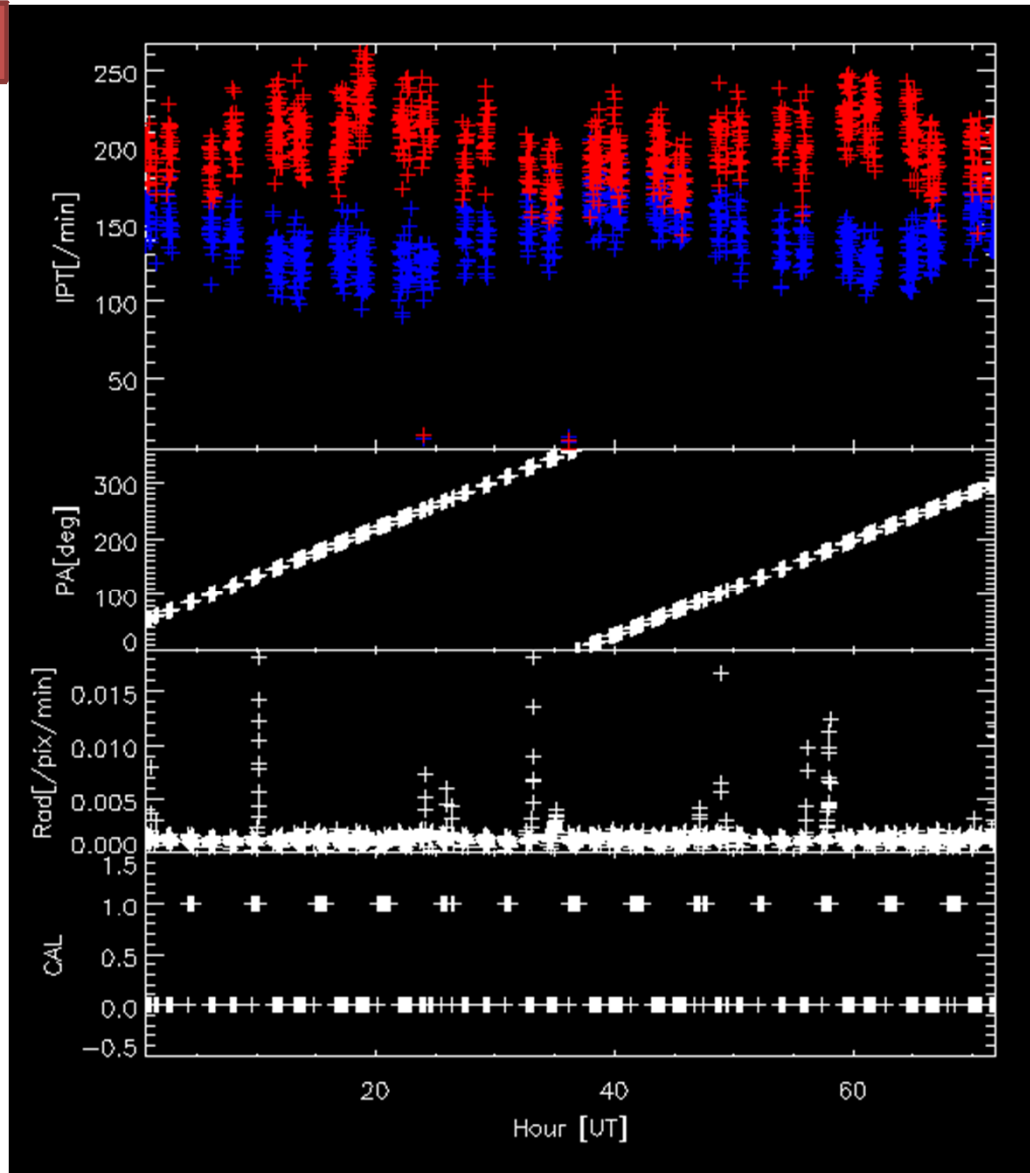

Result10

Brightness (total count in ROIs for 1-min) of Io plasma torus (blue : dawn, red: dusk)(65-78nm).

Io phase angle
(Io's orbital period = 42h)

Radiation belt contamination

CAL flag

Other things

- Solar radio data from IPRT
(Iitate planetary radio telescope)
 - <http://pparc.gp.tohoku.ac.jp/data/iprt/>
